# TRI WIBOWO CAHYO

*SOC Analyst / Purple Team Practitioner. I break things to learn how to defend them.*

Sidoarjo, East Java, Indonesia | 0823 2800 2098 | twibowo288@gmail.com | LinkedIn | Portfolio

I'm a SOC Analyst who treats cybersecurity as a continuous learning process. Defending systems is my profession, but understanding attackers is how I improve. By day, I investigate alerts across IBM QRadar, Cortex XDR, and Microsoft Defender. Outside of work, I build offensive skills through CTFs, lab exploitation, and C2 infrastructure, then turn those lessons into better detection logic and threat hunting using manual AQL and XQL queries. My journey has been self-taught from SMK to the SOC, driven by consistency rather than shortcuts, resulting in 70 technical writeups, the TryHackMe PT1 certification, and Top 5 rankings in Indonesia across both offensive and defensive security training platforms.

## EXPERIENCE

**Security Analyst** · PT Mitra Pinasthika Mulia (MPM Distributor)
*Oct 2025 to Present · Hybrid*

- Triage escalated security alerts from an IBM QRadar deployment ingesting thousands of daily log events across a multi-entity enterprise environment, driving qualifying cases through investigation and closure in TheHive.
- Run proactive manual threat hunting beyond rule-based alerts, writing custom AQL queries to surface anomalies like unusual user agents, access to sensitive files, and web attack patterns (Log4Shell/JNDI, path traversal, SQL injection, SSRF, Spring Boot Actuator probing) that automated rules miss.
- Built a 5W-based investigation framework for TheHive SOAR (who/what/when/where/why) to keep case write-ups consistent and reviewable across the team.
- Initiated alert playbooks, investigation runbooks, and a standardized threat-hunting finding format, which the SOC team later adopted as its working standard.
- Investigate incidents across Cortex XDR, Microsoft Defender for O365, and NDR, covering phishing analysis, endpoint telemetry review, and web attack detection, and maintain an internal XQL query library for recurring alert types.
- Resolve high-noise detections through evidence-based false positive analysis, validating vendor verdicts against process telemetry and signing data before closure rather than accepting them at face value.

**Red Team Intern** · Hack Secure
*Apr 2025 to May 2025 · Remote*

- Operated command-and-control infrastructure using Sliver and Starkiller, deploying implants across target VMs and running end-to-end adversary simulations.
- Documented each simulated attack into assessment reports with CVSS scoring and remediation written for both technical and executive readers.

**L2 Support Engineer** · PT Solusi247
*Apr 2023 to Apr 2025 · Hybrid*

- Provided L2 support for AI/ML platforms (Apache Airflow, Cloudera, Hadoop), debugging backend infrastructure with SQL, Bash, and Python.
- Performed root cause analysis on recurring platform issues, the analytical discipline I lean on every day in security investigations.
- Automated repetitive troubleshooting workflows while consistently meeting SLA targets.

## SELECTED PROJECTS

*A few of 10+ offensive and defensive builds. Full case board at trwbcy.github.io/portfolio.*

**Enterprise SOC Homelab: Full Stack on Open Source**

- Built an enterprise-grade SOC using 13 integrated open-source services across 5 VMs: Wazuh (SIEM), TheHive (SOAR), pfSense, Suricata + Zeek (NDR), ModSecurity (WAF), and Greenbone.
- Validated the full pipeline through adversarial testing: WAF blocks, NDR detects scanning, SIEM correlates, SOAR opens cases, firewall blocks IPs, with every layer coordinating at zero manual intervention.

**Astaroth-Style Red Team Campaign + Detection Engineering**

- Executed a multi-stage fileless attack against a fully patched Windows 10 host without triggering Defender, chaining living-off-the-land techniques (mshta, wmic, certutil) under multi-layer obfuscation.
- Turned the attack into defense: wrote detection rules for each LOLBin stage, mapped the chain to MITRE ATT&CK (T1218.005, T1027, T1105), and shipped a blue team implementation guide. This is the purple loop in one project.

**Incident Response: Phishing-Triggered Fileless Execution**

- First responder to a real-world mshta.exe execution triggered by phishing in a live enterprise environment. Isolated the endpoint via XDR before formal escalation, collected Windows Event Log evidence, and handed off to L2.

- Incident contained without further escalation; documented the full timeline and MITRE mapping (T1218.005) into the internal case record.

## TECHNICAL SKILLS

**Detection & Response:** IBM QRadar (AQL, custom hunting) · Cortex XDR (XQL) · Wazuh · Splunk · TheHive SOAR · MS Defender (Endpoint/O365) · Sysmon · PCAP · Detection Engineering · MITRE ATT&CK

**Offensive Security:** Web App Pentesting (Burp, SQLMap, OWASP Top 10) · Active Directory (BloodHound, Mimikatz, Impacket) · C2 Operations (Sliver, Metasploit) · LOLBin Abuse · Fileless Execution

**Threat Intelligence:** IPinfo · VirusTotal · AbuseIPDB

**Infrastructure:** Python · Bash · PowerShell · SQL · Git · Docker · AWS (EC2, S3)

## ACHIEVEMENTS & RECOGNITION

- 70 technical writeups on exploitation, forensics, malware RE, and incident response. Proof available upon request.
- **TryHackMe:** Rank #5 Indonesia, 100,000+ points across pentesting and web app security.
- **Hacktrace Ranges:** Defensive #5 / Offensive #5 in Indonesia.

## CERTIFICATIONS

- **2026:** Junior Penetration Tester (PT1, hands-on exam) · TryHackMe · Certified Blue Team Practitioner (CBTP, Merit) · The SecOps Group · Cyber Security 101 (SEC1) · TryHackMe
- **2025:** Certified Network Security Practitioner (Merit, The SecOps Group) · Certified API Security Practitioner (APIsec University) · Red Team Internship (HackSecure) · Advent of Cyber (TryHackMe)
- **2024:** Practical Ethical Hacking · Practical Web Application Penetration Testing · Practical Web Hacking (all TCM Security)
- **2023:** IT Support Specialist (Google) · Advent of Cyber (TryHackMe)

## EDUCATION

**S1 Sistem Informasi (Information Systems) · Universitas Terbuka** *(In Progress)*
Studying alongside full-time SOC work.

**SMK Diponegoro Tumpang · Teknik Komputer Jaringan (Computer Network Engineering)**

- IT Division Head, Student Council (2 yrs): led school-wide technology initiatives and IT infrastructure management.
- IT Support Technician Intern, ITN Malang (6 mos): campus network systems support and maintenance.
